

## Dilution Refrigerator

DynaCool (D850) / PPMS (P850)\*

The dilution refrigerator insert for the PPMS<sup>®</sup> enables access to a temperature range spanning 4 K all the way down to 50 mK for a number of compatible measurement options and custom user experiments. Software-automated gas handling of both evaporative and dilution cooling modes enables fast and responsive control across three decades of temperature and enables access to the lowest base temperature possible in a PPMS.

### Key Features

- Software user interface for temperature control is identical to that of the base PPMS, as are sequence commands – all gas handling operations for dilution and evaporative cooling modes are fully automated
- Closed-cycle gas handling loop pre-filled with proper <sup>3</sup>He/<sup>4</sup>He mixture ratio
- Automated maintenance wizards for storing and cleaning cooling mixture to maintain system performance
- Compatible measurement options: AC/DC electrical transport, heat capacity, AC susceptibility

*Zero-field heat capacity data depicting the superconducting transition in  $Ir_{0.8}Ru_{0.2}$  occurring near the base temperature of the Dilution Refrigerator. Sample provided by Milton S. Torikachvili of San Diego State University.*

## Dilution Refrigerator Specifications

### Temperature Control

Range: 50 mK to 4 K  
 Accuracy\*:  $\pm 10\%$ , for T = 50 mK  
 $\pm 2\%$ , for T = 300 mK  
 $\pm 1\%$ , for T = 4 K  
 Stability:  $\pm 0.2\%$  or better

### Operational Capabilities

Cooling Power: 0.25  $\mu$ W at sample stage at 100 mK  
 Cool Down Time (300 K to 50 mK): Less than 8 hours; 5 hours typical  
 Space for User Experiments: 0.88" (22 mm) diameter by 1.4" (35 mm) long cylindrical volume

### Operational Range:

0.05 to 4 K; 0 to 16 T

\*Quoted up to the maximum field of the PPMS.
